DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 6-8, 10-11, 13-14 and 17-18 are rejected under 35 U.S.C. 102(e) as being anticipated by United States Patent Application Publication 2004/0250111 to Flusberg et al.

As to claims 1, 7, 11, 13, 14, and 17, Flusberg et al. discloses in figures 3-4, a method of detecting a characteristic of an optical device having at least two optical inputs and two optical outputs comprising:

- Coupling a light source to said device through a switch (330) which has at least one input and two outputs, the at least two outputs of said switch being coupled to the two inputs of said device (340); and
- Coupling each of the two outputs of said device to a different detector (350, 360).

As to claims 2, 8, Flusberg et al. discloses a polarization controller (120). The controller of Flusberg et al. acts as a polarization splitter and rotator.

As to claims 6, 10, and 18, the signals are split through the polarization beam splitter and sent to separate photodetectors.

Claim Objections

3. Claim 4 recites the limitation "scanning the four Mueller polarization states" in lines 1-2. Claim 4 depends upon claim 1, however there is no mention of Mueller polarization states in claim 1. There is insufficient antecedent basis for this limitation in the claim.

4. Claims 3, 5, 9, 12, 13, 15, 16 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of Flusberg et al. fails to explicitly disclose or reasonably suggest a method of detecting polarization states by coupling a light source to a 1x at least 2 optical switch through a polarization controller that generates four Mueller polarization states.

Inventorship

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
